The Economic Consequences of Climate Change, OECD Publishing (Online Book Available for Free)

“This report provides a new detailed quantitative assessment of the consequences of climate change on economic growth through to 2060 and beyond. It focuses on how climate change affects different drivers of growth, including labor productivity and capital supply, in different sectors across the world. The sectorial and regional analysis shows that while the impacts of climate change spread across all sectors and all regions, the largest negative consequences are projected to be found in the health and agricultural sectors, with damages especially strong in Africa and Asia.”
